1. Introduction. There is a global rise in the structural use of engineered timber, along with increasing demand for architectural expression of the timber structure, that is exposing the structural timber internally within buildings.

Effects of exposed cross laminated timber on compartment

Discussion. Dry rot is the term given to brown rot decay caused by certain fungi that deteriorate timber in buildings and other wooden construction without an apparent source of moisture. The term is a misnomer because all wood decaying fungi need a minimum amount of moisture before decay begins. The decayed wood takes on a dark or browner crumbly appearance, with cubical like cracking or ...

Dry rot - Wikipedia

A deep foundation is a type of foundation that transfers building loads to the earth farther down from the surface than a shallow foundation does to a subsurface layer or a range of depths.. A pile or piling is a vertical structural element of a deep foundation, driven or drilled deep into the ground at the building site.

Deep foundation - Wikipedia
